

Geoportal.de

The **Geoportal** for Germany. Your path to more knowledge.

The website **Geoportal.de**, as a joint project by the Federal Government and the states (Bundesländer), offers a view of the contents of the Spatial Data Infrastructure Germany (GDI-DE).

The website is the central point of access to the data and services of the GDI-DE. Thus, it delivers clearly more performance than other geoportals, in which data and services are spatially or technically limited, for instance to a Land (federal state) or a specialist authority.

At the same time the national **Geoportal.de** is a vital instrument for the coordination of the participants of the GDI-DE network. This website contributes to the implementation of the service-based Architecture of the GDI-DE.

In practice, the focus is on the three-step process of publishing, finding and binding (“publish – find – bind”).

The **Geoportal.de** serves the needs of experts from the administrative, scientific and business sectors as well as of interested citizens.

The **Geoportal.de** is a public and free website without advertising and constitutes an active contribution by Germany to an open knowledge and information society.

Organisation

Geoportal.de is part of the German Spatial Data Infrastructure (SDI, so called from GDI-DE – Geodateninfrastruktur Deutschland) which is an initiative by the federation, the federal states (Bundesländer) and the local authorities.

Your path to more knowledge.

**Geoportal.de –
the Geoportal for Germany**

www.geoportal.de

searching.

The **Geoportal.de** offers a central search tool for data distributed all over Germany.

In addition to a thematic search option, searching can also be limited to any region or specific area.

Search interface

Form fields to search for themes/items (what?) and/or place (where?)

finding.

Following the search process the search results are displayed clearly.

With a single click details on the search hits can be displayed. These include, among others:

- the description of the dataset
- the competent authority of the dataset and
- the contact data to the respective dataset provider

Search results

Result view – detailed indication of information on the relevant dataset

connecting.

In the **Geoportal.de**, some data can also be shown in the form of a map and combined with one another.

This way, completely individual or theme-specific maps as, for example, with reference to environmental threats or population statistics can be generated.

Many data providers equip their data also with relevant factual information or legends, which can be accessed through the **Geoportal.de**.
